

TRACY VALANCE

Please read all instructions before beginning

- This is an easy-to-construct valance and can be adapted to fit any size window. It is installed on knobs with posts and decorative ties can be added, if desired. Our instructions are for a valance that is 42" finished width. The information needed to add to or reduce the width is included. The finished length of the valance is approximately 19" at the swag and 18" at the horn. The pattern allows for 3 1/2" or 5 1/2" returns at each side where the valance returns to the wall.
- We used a decorative contrast fabric for the horn lining, piping and ties. The swag sections are lined in decorative contrasting fabric. This valance can be reversible, however, indoor/outdoor fabric is recommended to prevent fading from the sun.
- Trim can be added along the bottom edge, if desired.
- This valance works best when constructed out of a light- to medium-weight decorative fabric. Heavyweight or upholstery fabric will not work well on the horn sections as the fabric will tend to flair out.
- Use a drapery interlining to give the valance the best body and shape. Interlining is a flannel-like cotton fabric that hangs between the face fabric and the lining. It is available in white and natural colors and can be found at most decorative fabric stores or at www.patemeadows.com. It is *not* the same thing as interfacing.
- This pattern allows for a 3 1/2" or 5 1/2" return; therefore, the valance must be installed with a 3 1/2" or 5 1/2" projection from the wall (see inset above). It *will not* work installed on knobs alone. We recommend using our decorative knobs with post adapters which are available at www.patemeadows.com. It can also be hung on a rod with rings (www.patemeadows.com).

Fabric & Supplies (for a 42" finished installed width) see chart below for other widths:
